

About the Client

Global Leader in Apparel Service, whose main office in Singapore and branches around the world. In order to centralize the Mail services and access anywhere in the world client approached Espore for the solution.

Approaching Espore with their requirements, the client was impressed with the knowledge and know-how that Espore presented during the project presentation stages.

Challenge – Time and Data Volume

As email is considered the vital communication medium of the client, downtime during the migration is the biggest concern and the timeline of the project also is very short. Espore had to be fast and flexible enough to accommodate the challenges of having to gather requirements, assure quality, deploy and train the users within 14 days.

Solution Approach

- Identified each of the 6 countries Requirements
- Existing Exchange server Database Sizes
- Number of Users
- Individual User Data Volume
- Prepare the existing Exchange Server for migration

Espore selected cutover migration method, as there are less than 1000 users and by the end of the project there will not be any on-premise Exchange Servers.

Results

Successfully and seamlessly migrated the on-premise Exchange mailboxes to office 365 Exchange in the required time and decommissioned the existing exchange on-premise servers. Users can access their mails anywhere in the world and IT administrators can easily manage from any location which is centralized.

Apart from this Espore also provided user guide and training for users and Administrators in different areas in order to full fill the day-to-day email management.

Case Study 1

Microsoft Office 365 Cloud Email Migration – Exchange 2003 to Office 365

Project Goals

- Move On-premise Exchange 2003 to Cloud based Email Services.
- Users of the company all around the world access mails in share calendar, Global Address book.
- Users anywhere in the world using Web Portal, Mobile devices or Outlook mail clients.
